Customer Reviews

The purpose of this book is NOT TO PRESENT ONE BEST WAY TO ACCOMPLISH A TASK BUT TO SHOW SEVERAL METHODS that may be used to complete a certain procedure with equally satisfying results

"Those who have worked in a dental laboratory, whether in the office or a commercial laboratory, know that techniques are varied and require a great amount of skill and concentration to accomplish. As long as one remembers that the most important step in prosthodontics is the one being done at any given time, the end result will be a well-fitting restoration in which the dentist, technician, and patient can take pride. The technique of arriving at a certain step or end result may vary according to the individual's knowledge and skill, but when each step is carefully controlled and basic principles are followed, the final results will be superior. The purpose of this book is NOT TO PRESENT ONE BEST WAY TO ACCOMPLISH A TASK BUT TO SHOW SEVERAL METHODS that may be used to complete a certain procedure with equally satisfying results. Obviously individual situations and requirements often dictate the method of choice....."[from the book of the preface by

Kenneth D. Rudd, Robert M. Morrow, John E. Rhoads]
