It's A Jungle Up There: More Tales From The Treetops

Synopsis

Drawn to the mysteries of tropical rain forests and fascinated by life in the treetops, Meg Lowman has pursued a life of scientific exploration while raising her two sons, Edward and James Burgess. This book recounts their family adventures in remote parts of the world (Samoa, West Africa, Peru, Panama, India, Biosphere 2, and others), from the perspectives of both kids and parent. Together they explore tropical rain forests, encounter anacondas and piranhas, eat crickets as hors d'oeuvres, discover new species, and nurture a family ethic for conservation. The chapters of the book focus on field biology questions, the canopy access methods developed to answer the questions, and conservation or education components of each expedition. Lowman enumerates the challenges and joys of juggling parenthood and career, and the children reflect on how their mom's work has affected their lives. A rollicking, inspiring book, *It's a Jungle Up There* is an upbeat portrayal of how a parent's career can imprint children, and how children in turn can influence the success and trajectory of their parent's career.

Book Information

Paperback: 320 pages

Publisher: Yale University Press (May 20, 2008)

Customer Reviews

A single mother who studies the science of eaten leaves (herbivory), Lowman (*Life in the Treetops*) has traveled to distant tropical locations such as Peru, India and Samoa, often with her two sons in tow, and in this testament to her rarified approach to parenting, urges parents to get out there with their kids and let them get dirty. Her co-authors are her sons, and their essays on Biosphere 2, bromeliads and beetles bolster her claims that immersion in nature can produce young

conservationists. She also boasts that her science work and her parenting style inform one another and help promote her goal of expanding forest conservation. She proselytizes throughout the book for environmental education, but it is the stories of spending water-logged nights aloft in the rainforest canopy and gross-out stories of eating hissing cockroaches that persuade most effectively. Readers will find themselves skipping through her repetitive exhortations to get back to the forests in order to get at the book's meat: adventure stories and oddball ecological information. The essays by her sons read like college-admissions essays, and the illustrations are needlessly whimsical, but Lowman's spirited tale of science and single parenting is inspirational. Following up her very popular *Life in the Treetops* (1999), rainforest biologist Lowman chronicles her life as a scientist who is also a single mom (her two sons, Edward and James Burgess, are listed as coauthors). It's a family adventure that spans the globe, from Peru to India to Panama and beyond. While the book addresses some pertinent scientific issues, such as species extinction and the devastation of the rainforests, readers will also enjoy the more personal elements of the story: the difficulties of bringing up two boys in some of the world's most isolated places. Lowman is a nimble writer, several cuts above many of her popular-science contemporaries; and her passion for her profession, and for her children, is both powerful and moving. What a really terrific read! In this book Dr. Lowman has co-authored with her sons, we find a beautiful story of developing a conservation ethic for families. The tone is so positive and inviting, I felt like I was up in the canopy with them. One of the really captivating elements of this book is the wonderful journal notes and essays by her sons. Their authentic voices make this a great book to share with young people. For example, her son's last touching essay in the book summarizes their family quest to combine science and spirituality in efforts to expand scientific research into a more global sense of responsibility through conservation. This is a topic seldom touched in science writing. What wise thoughtful teenagers! What I loved most about this book was that many parts of Lowman's story are the story of women in science, my story, about the challenges of balancing a career and the rest of our lives. Lowman's book is just the ticket for inspiration AND some reassurance that we can have a well-lived life that combines a passion for science with family and community. I am in awe of the courage it must have taken to share such a personal story, filled with

adventure, challenge, adversity in the work place, loss, humor, and quite a few poisonous snakes. We could use an Earth of sons and daughters raised by her. Lowman really is a role model for parents to become stewards of all of Earth's creatures, and her passion and work efforts certainly have made inroads to this goal. Through this story, Dr. Lowman and her sons will inspire and mentor thousands of current and future naturalists, both boys and girls. As I finished the last pages of this book, I decided I need to find my copy of her earlier book "Life in the Treetops" and read it again. What a terrific adventure. I highly recommend "It's a Jungle Up There" and will be giving copies to all the young people I know for birthdays, graduations, and other celebrations. And I believe I will share it with a few adults who could use a great read, and a little vicarious adventure.

Notes on Margaret Lowman's book, "It's a Jungle Up There---More tales from the Treetops," with Edward and James Burgess. Yale University Press, 2006. Margaret Lowman is a remarkable woman scientist. I say this not only after reading this book and her first book, "Life in the Treetops," but because I had the rare opportunity to be her Executive Assistant for 8 months during 2002-2003 while employed at the Marie Selby Botanical Gardens in Sarasota, Florida. Meg is an inimitable, intriguingly interesting scientist, enthusiastic about canopy research, ecology, and her family. This excitement exudes from within her into one's very own, and no matter what one does, it cannot be ignored. Likewise, "It's a Jungle Up There," is also enthralling. Her many scientific pursuits are entwined with her two boys' experiences in the field with her, into a wonderful and educational view of the world, its ecology and the workings of the world's ecosystems. For many single parents, Meg sets the stage as a fine example of "get up and go," and "leave no stone unturned." There appeared to be no obstacle that could not be overcome by personal persistence, with the end result of reaching the goal. Even small setbacks were used as stepping stones to move forward and to be used to a positive advantage. Her chapters on canopy research, canopy walkways, encounters with internationals, and environmental ethics for families, educate the novice in this comparatively new research area. Providing her children with an always new and exciting way to experience life through nature is certainly an example parents and teachers should emulate. The book is comfortable to read, has a glossary of terms and a selected bibliography for further reading on each chapter. An index of names and places referred to in the text also assists the reader for quick reference. Both Meg's books are fine examples demonstrating what a person can do if willing to accept the challenges offered. Do some self-promotion and be cognizant of an ever-increasing need to be a guardian of the world's biosphere. As her Executive Assistant for even a very brief time, I am proud to have shared some of the pages of "the padded chair" with her, and will always recall Meg

as a fair, straight and honest supervisor. Susan A. Jarzen CPSSecretary, Florida Museum of Natural History February 27, 2006

Meg Lowman is one of the foremost canopy ecologists of our time. Her work has advanced canopy access and our understanding of the importance of canopies for sustainability of global processes, as well as helping communities around the world to develop local opportunities through conservation and ecotourism. Having worked with Meg on several projects, I have witnessed her passion for canopy science and canopy conservation, as well as her dedication to her family. This book reflects both the substance of her work and the balancing act faced by many professionals who strive to achieve career goals and meet family needs. Meg has done an extraordinary job, especially during a time when she was a single parent, and is to be commended for sharing her experience for the benefit of others. Both sons are now in graduate programs and establishing their own careers in science and technology. Incorporating their perspectives and experiences in this book gives expression to the challenges and joys of exploration and demonstrates Meg's success in instilling a passion for learning in them. I highly recommend this book to those interested in the forest canopies as the high frontier, the excitement of field work and community development in remote locations, and the balance of professional goals and parenthood.
