Engineered Materials Handbook: Ceramics And Glasses (Engineered Materials Handbook, Vol. 4)

Synopsis

Provides exhaustive, yet practical information on processing, properties, testing and characterization, design, and applications of various types of ceramics and glasses. The coverage ranges from bricks to super conductors, windows to data transmission lines. Ceramics and Glasses consists of 170 articles divided into 15 major sections. The first section defines and classifies ceramic materials and provides introductory information on each class. Sections two through five deal with processing of ceramic materials. Powder processing, forming methods, sintering, and final shaping (machining) are described. Each article in these sections explains how to produce a 'flaw-free' product. A companion section on glass processing follows. Reliable methods of joining ceramics, a subject critical to the increasing use of structural ceramics are examined in section seven. What follows are two sections devoted to the characterization tools available for studying ceramics and glasses. Processing-structure-property relationships, which are key to the development of improved materials, are introduced. The knowledge required to design structural elements and concepts of design methodology are addressed in section ten. Design practices used for such applications as gas turbine engines, gasoline engines, and whisker-toughened ceramic components are detailed. An extensive review of property data is contained in section eleven. The emphasis is on the design engineering use of the data. The articles in this section serve to bring the users of property information up-to-date and to direct them to the sources of the most useful property data. The broad range of applications for ceramics and glasses are outlined in the volume's final four sections. Emphasis has been placed on the use of advanced materials for structural and electrical/electronic applications.

Book Information

Hardcover: 1217 pages

Publisher: CRC Press; 1 edition (December 1, 1991)

Language: English

ISBN-10: 0871702827

ISBN-13: 978-0871702821

Product Dimensions: 2.5 x 9 x 11 inches

Shipping Weight: 6.9 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 2 customer reviews

Best Sellers Rank: #1,222,287 in Books (See Top 100 in Books) #117 in Books > Engineering & Transportation > Engineering > Materials & Material Science > Concrete #1267 in Books >

Customer Reviews

Book came as described. Thank You

This book is a vast resource for anybody in the ceramic manufacturing and research field. It has information about basic processes of ceramic forming and glass melting, all the way to details about specific technical processes, such as sol-gel glass formation, fiberglass, and making cups, dishes, toilets, and a kitchen sink (literally!) I have not a question yet that this book couldn't answer.
